

Sales Module – UI Requirements

ERP System | User Interface Requirements

This document defines the essential user interface requirements for the Sales module. The Sales UI is designed around the workflow: Customer → Quotation → Sales Order → Invoice, with product and available-quantity data imported from an Excel sheet.

1. Sales Module Navigation

Screen	Purpose
Dashboard	Overview of sales activity and important statuses.
Customers	View, search, add, edit and deactivate customers.
Product Data Import	Upload and validate product data from an Excel file.
Quotations	Create, manage, send, accept/reject and convert quotations.
Sales Orders	View and manage sales orders and their statuses.

2. Sales Dashboard

- Display total quotations.
- Display accepted quotations.
- Display total sales orders.
- Display orders by status.
- Display recent quotations and sales orders.
- Provide quick actions such as Add Customer, New Quotation and New Sales Order.

3. Customer Management UI

3.1 Customer List

- Display customers in a table.
- Search customers by name, email or phone number.
- Provide Add Customer action.
- Provide Edit action.
- Provide Deactivate action.
- Show customer status (Active/Inactive).

3.2 Customer Form

- Customer Name – required.
- Email.
- Phone Number.
- Address.
- City.
- Save and Cancel actions.
- Validate required fields and basic email/phone formats.

4. Product Data Import UI

Product and available-quantity information is obtained through an Excel import process. Excel is used as the input source; imported data should be stored in the system database for normal Sales operations.

4.1 Upload Screen

- Allow authorized users to select an Excel file.
- Display the expected Excel columns.
- Provide Upload / Import action.
- Reject unsupported file formats.
- Show upload and validation errors clearly.

Expected Excel columns:

Product ID	Product Name	Category	Unit Price	Available Quantity
------------	--------------	----------	------------	--------------------

4.2 Import Preview

- Display the number of products found.
- Display valid records, warnings and errors.
- Show imported records in a preview table.
- Highlight invalid rows and explain validation errors.
- Provide Cancel and Confirm Import actions.

5. Quotation UI

5.1 Quotation List

- Display quotation number, customer, date, expiry date, total and status.
- Search quotations.
- Filter by status, customer and date.
- View quotation details.
- Edit quotations when allowed.
- Send, accept, reject and convert quotations according to their status.

5.2 Create / Edit Quotation

- Quotation number.
- Customer selection.
- Quotation date.
- Expiry date.
- Product selection from imported product data.
- Quantity.
- Unit price.
- Discount.
- Tax.
- Subtotal and total.
- Save as Draft and Send actions.
- Validate quantity and product availability before proceeding.
- Automatically calculate line totals, subtotal, discount, tax and final total.

5.3 Quotation Details

- Display complete quotation information.
- Display customer information.
- Display all product lines and calculated totals.
- Display quotation status clearly.
- Provide actions appropriate to the current status.
- Provide Convert to Sales Order when the quotation is accepted.

Quotation Statuses

Draft → Sent → Accepted

Rejected may be used when the customer rejects a quotation.

6. Sales Order UI

6.1 Sales Order List

- Display order number, customer, order date, total and status.
- Search sales orders.
- Filter by status, customer and date.
- Open Sales Order Details.

6.2 Sales Order Details

- Display sales order number.
- Display customer details.
- Display order date.
- Display products, quantities, unit prices, discounts, taxes and total.
- Display order status.
- Display the related quotation reference when applicable.
- Display invoice reference/status when an invoice has been generated.
- Display product availability information where required.

Sales Order Statuses

Draft → Confirmed → Processing → Completed

Cancelled may be used when an order is cancelled.

7. Common UI Requirements

- Use consistent navigation, buttons, forms, tables and status badges throughout the Sales module.
- Show clear success, warning and error messages after user actions.
- Require confirmation for destructive actions such as deactivation or cancellation.
- Disable actions that are not valid for the current quotation/order status.
- Use pagination for large customer, quotation and order lists.
- Provide loading indicators during imports and other long-running operations.
- Use responsive layouts so the main screens remain usable on different screen sizes.
- Restrict Sales screens and actions according to user permissions.

8. Main User Workflow

1. User imports product data from Excel.
2. User creates or selects a customer.
3. User creates a quotation using imported product data.
4. System calculates quotation totals.
5. User saves/sends the quotation.
6. Accepted quotation is converted into a sales order.
7. Sales order is confirmed and processed.
8. Invoice information is displayed when the invoicing process creates the related invoice.

9. MVP Priority

Priority	UI Feature	Purpose
Critical	Customer List/Form	Customer management.
Critical	Product Data Import	Excel upload, validation and preview.
Critical	Quotation List/Form/Details	Core quotation workflow.
Critical	Quotation → Sales Order	Conversion of accepted quotations.
Critical	Sales Order List/Details	Core order management.
Critical	Automatic Calculations	Subtotal, discount, tax and total.
Important	Search and Filters	Find customers, quotations and orders quickly.
Important	Dashboard	Basic sales overview.
Important	Invoice Reference/Status	Show connection to invoicing.

10. Out of Scope for the Initial UI

- E-commerce storefront.
- Online payment gateway.
- Advanced CRM functionality.
- AI-based sales forecasting.
- Advanced commission management.
- Complex subscription billing.
- Advanced international tax configuration.
